

## Editor's Notice

I shall be retiring from my employment with the Institute of Terrestrial Ecology on 31 March 1989. I shall continue as Editor of the *Bulletin* as usual, but after that date all communications should be addressed to me at my home address, as follows:

Dr P. Merrett,  
6 Hillcrest,  
Durlston Road,  
Swanage,  
Dorset, BH19 2HS.

As I shall no longer have easy access to photocopying facilities, it is **essential** that all authors provide **three** copies of all **text** and **figures** (i.e. the original and 2 photocopies), so that I have adequate copies for sending to referees. Failure to comply with this request will inevitably result in delays and extra costs. In order to save possible unnecessary postage, authors need not send the original figures until after the paper has been accepted (especially if the figures are bulky).

### Twelve hundred new county records of British spiders

Peter Merrett

6 Hillcrest,  
Durlston Road,  
Swanage, Dorset, BH19 2HS

#### Introduction

The county records which follow are additions to those shown on the distribution maps in Locket, Millidge & Merrett, *British Spiders*, Vol. III (1974) and those listed in my two papers in *Bull.Br.arachnol.Soc.* 3(5): 140-141 (1975) and 5(7): 332-336 (1982). The counties listed are those which existed before the boundary revisions of April 1974. Records for islands are treated as described in *British Spiders*, Vol. III, p. 132. For ease of comparison, the nomenclature and species order used in Vol. III is also followed here, except of course for new species and those old species which have since been split into two species.

The list includes both published and unpublished records, the principal contributors of the latter being K. Alexander, M. J. Amphlett, N. P. Ashmole, M. Askins, S. I. Baldwin, E. A. Blackwell, K. Catley, R. B. Coleman, D. R. Cowden, J. E. Dalingwater,

R. M. Dobson, S. Dobson, E. Duffey, F. L. Farr-Cox, M. J. Fulton, C. Geddes, C. Hambler, P. R. Harvey, D. Higgins, P. D. Hillyard, D. Horsfield, G. V. Jackson, A. Jones, R. Jones, R. G. Loxton, M. A. Macdonald, J. E. D. Milner, J. A. Murphy, M. Nelson, J. R. Parker, H. Read, M. J. Roberts, K. M. Rowland, S. P. Rushton, A. Scott, P. A. Selden, G. C. Slawson, C. J. Smith, R. G. Snazell, J. A. Stewart, M. Taylor, T. J. Thomas and S. A. Williams (with apologies to anyone whom I have inadvertently omitted).

**Although records are being collected on a 10km square basis for the spider recording scheme, I think it is also worthwhile to continue keeping the county records up-to-date, and I should therefore be pleased to receive any additional new county records for publication in future lists.**

I should be particularly glad to receive ANY reliable records of species which have recently been split into two species, as all old records of these species have become uncertain (especially *Zelotes apricorum/subterraneus*, *Pirata piraticus/tenuitarsis*, *Pocadicnemis pumilajuncea*, *Micrargus herbigradus/apertus* and *Agyneta cauta/olivacea*, in which both species of each pair appear to be widespread). In the cases of *Enoplognatha ovata/latimana* and *Walckenaeria antica/alticeps* it is likely that the great majority of old records will refer to *E. ovata* and *W. antica* respectively.
